Paul Philip

Frontend Engineer | React & Next.js Developer

📍Nigeria (open to remote) 📞+234 903 773 0169 philipupaul@gmail.com Portfolio LinkedIn GitHub

SUMMARY

Frontend engineer with 4+ years of experience building fast, accessible web applications with **React**, **Next.js**, and **TypeScript**. Track record of measurable performance wins, including a **98+ GTmetrix** score on a multi-locale booking platform and a **20%** faster page render through bundle optimization. Experienced in component architecture, **GraphQL** and REST integration, and testing across fintech, Web3, edtech, and travel products, with cross-platform mobile experience in **React Native**.

EXPERIENCE

Frontend Developer | EcoHotels.com — Nov 2023 – Dec 2025

- Built responsive, multi-locale hotel booking flows with **Next.js**, **React**, **TypeScript**, and **Tailwind CSS**.
- Drove Core Web Vitals and performance work [e.g. image optimization, code splitting, SSR/SSG], reaching a **98+ GTmetrix** performance score.
- Developed a modular, accessible component system that kept design consistent across global platform interfaces.
- Worked in an agile, distributed team to turn complex business requirements into fast, intuitive user flows.

Frontend Engineer | Eduvacity — Mar 2023 – Dec 2023 [add: Contract / Part-time]

- Owned the responsive UI architecture for a multi-role education management platform using **Next.js** and **Tailwind CSS**.
- Built reusable component libraries and reduced bundle size, speeding up page rendering by **20%**.
- Ran code reviews and set frontend conventions to keep the UI consistent across every user role.

Frontend Engineer | Cragpay — Jan 2022 – Jan 2023

- Led development of merchant-facing dashboards and admin portals with **Next.js**, **TypeScript**, **Chakra UI**, and **GraphQL**.
- Reduced frontend bugs by **30%** through integration testing, state management improvements, and structured QA.
- Wrote technical documentation and product requirement specs for core payment platform features.

Frontend Engineer | PinnacleICTs — Apr 2021 – Dec 2021

- Delivered custom interfaces and interactive feature modules for early-stage startup clients.
- Mentored junior developers and interns on frontend architecture, Git workflows, and modern JavaScript.

PROJECTS

Rown — Non-Custodial Crypto Wallet (Web & Mobile) *| Next.js, React Native, Expo, TypeScript |* rown.xyz · Google Play

- Built the **React Native** and **Expo** mobile app, live on Google Play, and the **Next.js** web app for a non-custodial wallet that sends crypto to a phone number instead of a wallet address.

- Built a unified stablecoin balance across **7 chains** (Ethereum, Solana, Polygon, Base, Arbitrum, Optimism, BNB), so users pay from funds split across chains in one tap, with most transfers settling in under **30 seconds**.
- Implemented phone-number sign-up and recovery with no seed phrases, plus a per-transaction private mode toggle.
- Integrated backend services for real-time pricing, authentication, cross-chain routing, and transaction status, and tuned rendering for smooth Android performance.

ThriftExpert — Cooperative Management Platform (Feature Upgrade) *| [web admin stack], React Native |* thriftexpert.org · Google Play

- Delivered a major feature upgrade to a live cooperative savings platform (mobile app and web admin), adding access control, loan and dividend engines, and compliance features to the existing codebase.
- Implemented **role-based access control** at platform and cooperative level, with permission matrices, role-based UI visibility, maker-checker rules that block self-approval, and dual approval for high-risk actions. Split member, non-member, and admin experiences with dynamic dashboard routing.
- Built the loan workflow (apply → review → approve → disburse → repay) with role-based stage enforcement and guarantor tracking, plus a non-member loan flow with **KYC** gating, collateral input, and NIN and organisation verification. Integrated simple, flat, compound, and reducing-balance interest models with a dynamic logistics fee.
- Built a dividend engine covering surplus calculation, shares/savings/hybrid policies, eligibility and retention rules, and a compute → review → approve → publish → pay workflow.
- Added security and integrity controls: biometric and two-factor login, failed-login lockout, session management, **KYC** status tracking, reversal-only records, duplicate prevention, period locking, and read-only audit logs.

SKILLS

Frontend: React, Next.js (App & Pages Router), TypeScript, JavaScript (ES6+), Tailwind CSS, Chakra UI, HTML5, CSS3

State & Data: [Redux Toolkit / Zustand], [React Query], GraphQL, REST APIs, Firebase, PostgreSQL, MySQL

Performance & Quality: Core Web Vitals, bundle optimization, accessibility (WCAG), [Jest, React Testing Library]

Mobile: React Native, Expo, NativeWind

Tools: Git, GitHub, Vercel, Postman, Figma [if used]

EDUCATION

Nigerian Institute of Leather and Science Technology — *2025*

- Higher National Diploma (HND), Computer Science
- Lead, Google Developer Student Clubs (GDSC): organized and taught technical workshops on **Firebase** and app development for 30+ engineering students.
